TAKING FUN SERIOUSLY

OSET

Learning to ride the fun & easy way.

There's never been a simpler, easier or safer way to learn the joys of riding. OSET electric mini bikes are light, simple machines that are amazingly easy for young children to learn on. Now, for the first time ever, children as young as 3 can learn all the fundamentals of riding in a safe, clean, non-intimidating way.

OSETs are driven by electric motors, which have the benefits of being powerful, torquey, fast accelerating and, above all... silent. Kids are not afraid to learn, which is half the battle for new riders. Instead of being put off by noisy, smelly gasoline bikes, OSET riders simply twist and go!

As well as being simple, OSETs are fully functional mini-motorcycles. Each has a twist grip throttle, front and rear brakes and full suspension. In addition, OSETs can be easily adjusted to suit the skill level of the rider. A 'speed dial' can be quickly set by the responsible adult to a top speed anywhere from zero to maximum.

There really are no comparable bikes to learn on. Where gasoline bikes are heavy, noisy, smelly and difficult to maintain, OSETs are light, silent and low maintenance. In fact, OSETs are easier to learn on than bicycles. There's no pedaling! Simply set a low speed and support the rider.

The Future is now!

One of the biggest advantages is that OSETs can be used every day, without annoying anybody. Riding in the yard, the neighbors yard (with permission!) or even in the house is possible. The bikes don't make noise, don't drip oil and are small enough to be ridden in confined spaces. OSETs are Trials bikes, designed to be ridden in tight spots, over obstacles, up and down hills.

Skills learned on Trials bikes apply to any form of riding. OSET riders can go on to excel in any two wheeled sport. Skilled riders are safer riders. If all the fundamentals of riding are learned at a young age, they can be safer riders for life.

At OSET, we've witnessed 2 and 3 year olds riding proficiently on two wheels, 4 year olds pulling big wheelies, 5 year olds doing 'splatters', 6 year olds doing turn-stoppies, and 8 year olds doing flip turns. These are techniques that simply can not be learned on gas bikes. This puts OSET riders YEARS ahead. Because real techniques can be learned so young, good habits start right at the beginning.

OSETs are now a fundamental part of many club events all over the world, and are the starting point for young riders learning to ride. OSETs are now the starting point, and the foundation for the future of various motorcycle sports.

The language of riding is like any other. It's easiest to learn when you're young. Now, for the first time, a bike is available that young riders don't have to fight. These bikes are simply RIGHT!

Gas bikes can only be used in designated areas that are usually a drive away. Dad usually wants to ride too. Naturally, the child wants Dad to instruct, start his/her bike and pick up the bike if they fall. Dad usually doesn't get much riding time, and often decides to leave the kid at home next time! Even when the child does ride, it's all they can do to balance, twist the throttle and turn the bars. Virtually no REAL technique is learned from this!

OSET bikes are virtually silent, and have no oil or gas to leak, no kickstart, no hot exhaust, no carburetors, no jetting. OSETs work as well at 13,000' as at sea level!

The child can ride in MANY more areas. Courses can be set up in the back yard, in the garage... even in the house! Of course, they can also be used at some tracks, in fields and many other places. While you're having a cup of coffee, your child can be riding! Because the bikes weigh so little, the children learn how to use their bodies on the bike by standing up, hopping, leaning the bike into turns, lifting the wheels and so much more! They can attempt many more obstacles and techniques in the knowledge that if they get it wrong, they can hold the bike up and save it due to the light weight and low seat height.

With their Trials Bike geometry and fast accelerating electric motors, OSETs allow their riders to develop skills that put them literally YEARS ahead of the gas bike riders!

Learn the language of riding.

TAKING FUN SERIOUSLY

OSET 12.5

Wheelbase	- 28"
Seat Height	- 15"
Handlebar Height	- 25"
Motor	- 500w
Top Speed	- 14mph
Weight	- 47lbs
Brakes:	- V-Brake(F), Band(R)
Suspension:	- Telescopic (F), Spring (R)
Tires:	- 12.5" x 2.4"

OSET16.0 24v/36v

Wheelbase	- 35"
Seat Height	- 18.5"
Handlebar Height	- 30"
Motor	- 600w-24v, 750w-36v
Top Speed	- 15mph
Weight	- 57/62lbs
Brakes:	- Discs - F&R
Suspension:	- Telescopic (F), Spring (R)
Tires:	- 16" x 2.5"-F/2.7"-R

The OSET 12.5 is for the under 5's while the 16.0 is the perfect machine for riders from 5 to 10 years old. The 16.0 has two options - a 24v version for the younger and less experienced riders and a very powerful 36v version for older and more experienced riders. All bikes have powerful rare earth neodymium magnet motors. With such light bikes, and lightweight riders, these machines will easily climb steep hills and leap up rock steps. A full coverage chain guard and parental speed dial allow parents to be in control of the rider. With great suspension and an awesome disc brake, these bikes are amazing! Please see the web-ste for more detail and to see lots of customer video's!
